## 1. Product Specifications

Product Model	WB-300 (Basic Electronic Medical Beam Scale) WB-300MH (Electronic Medical Beam Scale with Mechanical Height Rod) WB-300DH (Electronic Medical Beam Scale with Digital Height Rod and BMI Function)
Type of Measurement	Four (4) Half Bridge Load Cell
Capacity	440 lb – 0.1 lb 200 kg – 0.05 kg
Graduation	0.1 lb, 1/4 lb, 0.05 kg
Range of Height (WB-300MH and DH)	22" to 82" (55 cm – 208 cm)
Height Graduation (WB-300MH and DH)	1/4" (1.0 cm)
Power Source	(3) AA Alkaline batteries (included) for scale functions (1) 3-volt CR123 Lithium battery (included) for clock display
Display	Dual panel LCD 1.0" display (liquid crystal display)
Platform Size	Extra Large 16" x 12" x 2-3/4" non-slip platform
Product Dimensions	16.26" (413 mm) x 20.75" (527 mm) x 51.02" (1296 mm)
Product Weight	WB-300 26.00 lb/11.80 kg WB-300MH 27.50 lb/12.50 kg WB-300DH 27.50 lb/12.50 kg

## 2. Important Notes for Users

### Handling Tips

This scale is a precision instrument utilizing state-of-the art technology. To keep the unit in the best condition, follow these instructions carefully.

- Do not attempt to disassemble the measuring platform and display.
- Avoid excessive impact or vibration to the unit.
- Place the unit in an area free from direct sunlight, heating equipment, high humidity, or extreme temperature change.
- Never submerge in water or spill chemical liquids. To clean, use a dampened cloth and mild detergent.
- If the product will not be used for a long period, remove the batteries before storage.

### Moving the Scale

The scale has two rear wheels on the back of the platform. To avoid damage, use the wheels when moving the scale. Hold the display head securely and tilt the scale back about 30-45 degrees. Wheels will allow easy movement. **IMPORTANT:** Any time the scale is moved or re-located, be sure to press the 'Zero' key before use.

### Disabling Key Sounds

To confirm a key operation has been selected, a "beep" will sound when any key is pressed. To disable this sound, press the up arrow and down arrow keys simultaneously for three seconds. To re-activate the key sound, press the up arrow and down arrow keys simultaneously again for three seconds. The volume of this beep sound is not adjustable.

### Changing Measurement Units

This function can be used to change the measurement units on the Weight display: lb, kg, and fractional lb. The measurement unit keys are located on the left display panel. You may press this key before or while the user is on the platform.

Press 'LB' to set to pound mode. Decimal weight value in pound mode (0.1 lb increments)

Press 'KG' to set to kilogram mode. Decimal weight value in kilogram mode (0.05 kg increments)

Press 'LB (F)' to set to fractional pound mode. Fractional weight value in pound mode (1/4 lb increments)

### 3. Components Description

**Standard Features:** WB-300, WB-300MH, WB-300DH

- ① Measuring Platform
- ② Weight LCD
- ③ Clock LCD
- ④ Battery Compartment
- ⑤ Height Rod Arm (For WB-300MH and WB-300DH)
- ⑥ Height Rod Sliding Block
- ⑦ Upper Pillar Column
- ⑧ Four feet on the bottom of platform

WB-300MH/WB-300DH

WB-300

## 4. Key Operation

## 5. Assembly Instructions

### List of Components

- ❶ Base (fully assembled and pre-wired to display assembly)
- ❷ Lower Pillar Assembly
- ❸ Tightening Knob
- ❹ Lower Height Rod Assembly
- ❺ Top Height Rod Assembly (fully assembled with pivoting height measuring lever)
- ❻ Top Head Display Assembly (fully assembled and pre-wired to base)
- ❼ Height Rod Arm
- ❽ Wire Harness

If the scale is to be disassembled, please use this plastic tool to separate the two pillars.

1. Carefully remove all components from the box.
2. Place all items on the floor side by side. Make sure not to excessively pull the wire harness that connects the base (1) to the top assembly (6).
3. Carefully **pull wire harness** on topside of lower pillar (2) as pillar is inserted into the base (1). This will minimize the length of straight wire and ease assembly.
4. Once the lower pillar (2) is placed firmly in the base (1), tighten the knob (3) to the threaded stud located underneath the base.
5. Snap the top assembly (6) into the lower pillar assembly (2). Make sure to push in the excess length of coiled wire harness (8) into the open ends of the two pillars as you bring them together. **Be careful not to pinch the coiled wire harness (8) between the two pillars.**
6. Assemble the height rod arm (7) to upper height rod (5) from the bottom of upper height rod.
7. Assemble the top height rod assembly (5) to the lower height rod (4). Slide the assembled height rod into the height rod opening on the pillar assembly. Push all the way down.

**Note:** For scales without height rod skip steps 6 & 7.

## 6. Before Use

### Level the Scale

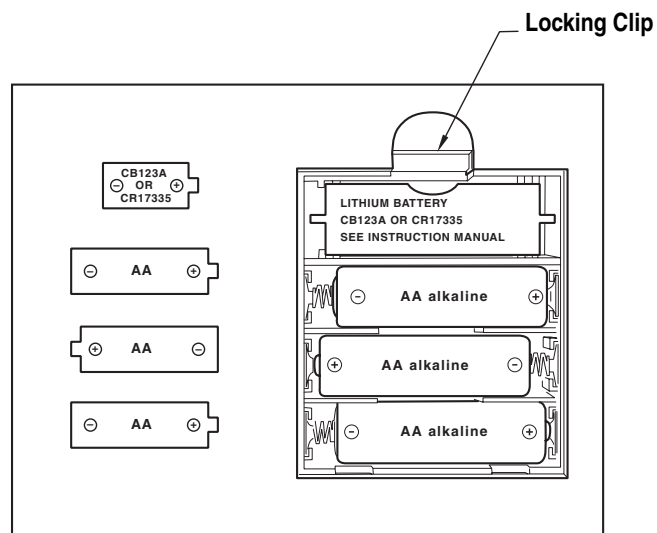

For best results, place the scale on a hard, even surface or carpet without padding. If the four feet located on the bottom of the platform do not make full contact with the floor, adjust the height of the two **rear feet** by hand until the scale becomes stabilized. **Note:** The two front feet are not adjustable.

### Insert the Batteries

The scale comes with three (3) replaceable AA alkaline and one lithium battery in a separate bag. The battery compartment is located on the back of the LCD display.

1. Press down and pull battery compartment locking clip to remove the battery compartment cover.
2. Insert batteries with the correct polarity.
3. Replace the battery compartment cover and push it until you hear it click.

### Remove the LCD Cover

Please remove the protection film placed on the LCD before use.

## Set up the Clock

### Entering Clock Adjusting Mode

1. Press and hold the 'Clock' key on the right display panel for 2 to 3 seconds.  
The Clock LCD panel will flash '12 Hr' or '24 Hr' depending on the current display mode.
2. Use 'Up' or 'Down' key to select either 24 Hr or 12 Hr mode. If 12 Hr mode was selected, the AM and PM icon will appear on the right corner of clock.
3. Press 'Clock' key to confirm.
4. Use 'Up' or 'Down' key to program the correct hour, and press 'Clock' key to confirm.
5. Use 'Up' or 'Down' key to program the first digit of minute while the first digit of minute is flashing, press 'Clock' to confirm.
6. Use 'Up' or 'Down' to program the second digit of minute, press 'Clock' to confirm.
7. The programmed time will be displayed on the clock LCD.

**Note:** After 5 seconds or more of keypad inactivity during this process, the adjusted clock will be saved automatically.

When you change or re-install the lithium battery, the clock setting will be reset to 12:00 pm. Please follow the instructions above to reset the clock. Changing the (3) AA batteries will not cause the time setting loss.

## Setting to Zero

Zero function enables the user to reset the scale to 0 lb or 0 kg while it is free of objects on the platform. It is recommended to use this function in the following situations:

- For first time use of the scale.
- Every time the scale has been relocated.
- When the Weight LCD does not show 0 lb or 0 kg while the scale is free of objects on the platform.

1. Remove objects from the platform.
2. Press 'Zero' key.  
"---" followed by 0.0 lb/0.00 kg/0 lb F will be displayed on the Weight LCD.

The scale will automatically shut off in 20 seconds.

The scale has been set to 0 lb/kg.

## 7. Instructions for Use

### Weighing Procedure

There are three ways to measure weight depending on the situation.

- **Auto-On Function** can be used when the scale is in off-mode and the user is not on the scale.
- **Turn-On Function** can be used when the scale is in off-mode and the user is not on the scale.
- **Wake-Up Function** can be used when the scale is in off-mode and the user is already on the scale.

### Auto-on Function

When the scale is in off-mode and the user is not on the scale, the user may simply step on the platform.

1. Step on the platform  
"---" will appear on the Weight LCD.
2. Stay on the center of platform and stand still.  
The weight will be locked-in and displayed on the Weight LCD. 'Hold' sign will appear in the upper left corner of the Weight LCD.
3. Step off the scale.  
The Weight LCD will display the weight for 10 seconds, then the scale will automatically shut off.  
If the user remains on the platform, the Weight LCD will display the weight for 20 seconds, then automatically shut off.

**Note:** If the weight is less than 30 lb, the 'Auto-On' function will not work. Please follow Turn-on Function instructions listed below.

### Turn-on Function

When the scale is in off-mode and the user is not on the scale, press any key to turn the power on.

1. Press any key to activate the scale.  
"---" followed by 0.0 lb/0.00 kg/0 lb F will appear on the Weight LCD.  
If you do not step on the scale within 20 seconds after 0 is displayed, the scale will automatically turn off.
2. Step on the platform.
3. Stay on the center of platform and stand still.  
The weight will lock-in and be displayed on the Weight LCD. 'Hold' sign will appear in the upper left corner of the Weight LCD.
4. Step off the scale.  
The Weight LCD will display the weight for 10 seconds then the scale will automatically shut off.  
If the user remains on the platform, the Weight LCD will display the weight for 20 seconds then automatically shut off.

### **Wake-up Function**

This function can be used if the user wishes to measure the weight immediately after the first reading. The scale must be in off-mode and the user must already be on the scale.

1. Press any key except 'Zero' key to activate (wake up) the scale.  
DO NOT press 'Zero' key.
2. Stand still.  
"---" will be displayed on the Weight LCD. The weight will be locked-in and displayed on the Weight LCD. 'Hold' sign will appear in the upper left corner of the Weight LCD.
3. Step off the scale.  
The Weight LCD will display the weight for 10 seconds then the scale will automatically shut off.  
If the user remains on the platform, the Weight LCD will display the weight for 20 seconds then automatically shut off.

**Note:** DO NOT press any key while the scale is waking up and before the weight has been locked-in and displayed on the Weight LCD. If the user presses a key while the scale is waking up, the weight reading will not be locked; instead it will operate according to the key you selected.

## Measuring Height Procedure (WB-300MH and DH)

The user should step on the platform without wearing shoes for accurate measurement. Always have someone assist the user for accurate measurement.

1. Adjust the Height Rod Arm position before the user steps on the platform.  
Place hand on the Height Rod Arm.

To avoid danger of breaking or coming loose, you must hold the height rod arm securely.

If the subject is taller than 44", pull the Height Rod Sliding Block and Height Rod Arm at the same time upward so that the arm is positioned higher than the subject's head.

If the subject is shorter than 44", move the Height Rod Arm down.

2. Gently lower the Height Rod Arm until the Height Rod Arm touches the very top of the user's head.

3. Read the measurement. (WB-300MH)

If the subject is taller than 44", read the number just above the top of the Upper Pillar Column (see example #1).

If the subject is shorter than 44", read the number below the Height Rod Arm (see example #2).

**Reading the height measurement of 44" or MORE**

**Reading the height measurement of 44" or LESS**

## 8. General Troubleshooting

### Weight Capacity: 'E'

If the weight is less than 10 lbs, the Weight LCD will display the weight, however, the reading will not lock in. Auto-on function will not work if the weight is less than 30 lbs.

If the weight exceeds the scale's maximum weighing capacity, the display panel will register 'E' and the scale will shut off in 2 seconds.

**Weight LCD**

### Low Battery Warning: 'LOWBATT' / 'LoAA,' 'nobAt,' 'Ad Er,' 'Lo L'

The scale is operated by three replaceable AA alkaline batteries. If the AA batteries are low, 'LOWBATT' icon will flash on the Weight LCD, and 'LoAA' will flash on the Clock LCD alternating with clock for two seconds. Please replace with three new AA alkaline batteries immediately. Please refer to Inserting Batteries for instructions. If you see 'Ad Er' or 'nobAt' on the weight LCD, make sure the batteries are properly installed and have contact with the battery chamber.

The clock on this scale is operated by one replaceable 3-volt CR123 Lithium battery. If the lithium battery is low, 'LOWBATT' icon will flash on the Weight LCD, and 'Lo L' will be displayed on the Clock LCD alternating with clock for 2 seconds. This will continue until the lithium battery runs out, showing the Clock LCD panel blank. Please replace with one new lithium battery immediately. Please refer to Inserting Batteries for instructions.

**Clock LCD**  
**The Lithium Battery is low.**

**Clock LCD**  
**The AA Batteries are low.**

## Replacing Batteries

The scale is operated by three (3) replaceable AA alkaline batteries for weighing and (one) 3-volt CR123 Lithium battery for clock operation. The battery box is located on the back of the LCD display.

1. Lift and remove the battery compartment cover located on the back of the LCD display.
2. Insert batteries with the correct polarity.
3. Replace the battery compartment cover and push it until you hear the click sound.

If the lithium battery was replaced, the clock needs to be reprogrammed.

## Resetting the Scale

After battery replacement, the scale may need to be reset in the following situation:

1. If the batteries were installed in the incorrect polarity — after being replaced in the correct polarity.
2. When the low battery sign(s) is still displayed even after the new batteries are installed.

In order to reset the scale, take a ball point pen to push a button hidden behind the lithium battery. Please reprogram the clock.

## 9. Calibration

This product has been properly calibrated at the factory. You must have certified weights in order to properly calibrate this product. The calibration procedure is available upon request. Please call our customer service to request the calibration manual.
